

Scalix - Feature #60618

add ability to use folder DREF in api calls instead of Folder name

08/10/2016 04:53 AM - Alexey Bobyr

Status:	Resolved	Start date:	08/10/2016
Priority:	Normal	Due date:	08/10/2016
Assignee:	Alexey Bobyr	% Done:	100%
Category:	Scalix API	Estimated time:	0.00 hour
Target version:	Scalix 12.6		
Operation System:	noarch package		

Description

for e.g. now you need to make a request which looks :

```
http://192.168.122.53/api/sxadmin-test@xxxxx.com/mailbox/Contacts/
```

but folder name 'Contacts' is simple (english chars)

for folders for example 'Моя пака №1' or 'New Folder #2 121' need to escape name and its not always is easy way. In second example # will break everything

So need ability to get folder content by folder DREF and omit pain full job with char qouting | escaping ...

for e.g Contacts folder has following DREF 00010a029c1a3275

```
http://192.168.122.53/api/sxadmin-test@xxxx.com/mailbox/00010a029c1a3275/
```

and it must output folder contents - the same output if we would called /mailbox/Contacts/

History

#1 - 08/10/2016 04:53 AM - Alexey Bobyr

- Target version set to 12.7

#3 - 04/19/2017 06:26 AM - Alexey Bobyr

- Target version changed from 12.7 to Scalix 12.6
