<b>Target version:</b>	Scalix 12.6		
<b>Operation System:</b>	Rhel 7		

#### Description

This ER comes from investigation of SWA download error when system is fully loaded on RHEL7.  
This may not fix anything but at least it allows the sleep time to be tuned down from previously fixed 1 second.  
The sleep kicks in when the IMAP connection rate hits a limit, normally 10 connections per second set by installer.  
By default (no general.cfg setting) the sleep time will remain 1 second.  
To change it to 0.1s set IMAP\_CONNRATE\_SLEEP=100000 and restart all IMAP processes.

#### History

##### #1 - 09/20/2016 11:32 AM - Danny T

fixed in 14933 Bluenose and merged to 14934 trunk.

##### #2 - 09/22/2016 06:12 AM - Danny T

- Tracker changed from Feature internal to Feature
- Due date set to 09/22/2016
- Status changed from In Progress to Resolved
- Assignee changed from Danny T to QAGroup
- % Done changed from 0 to 100
