Description see subject			

History

#1 - 07/13/2019 04:09 AM - Alexey Bobyr

some changes in

```
scalix-platform-12.8.0.28997-0.noarch.rpm  
scalix-sis-12.8.0.26788-1.noarch.rpm  
scalix-swa-12.8.0.28974-0.noarch.rpm  
scalix-wireless-12.8.0.29216-1.noarch.rpm
```

Also there are some restrictions if user will use another CardDav client which uses Vcard version 4 format. AddressBook wont show it because max supported version for this client is 3.

Also System directory is not shown does not know for now why. But there is some information that AddressBook app at MacOs shows content only for one folder due some client restrictions.

To be able to use AddressBook in Mac need to reset psql cache . It will regenerate to more valid VCARD format for MacOs AddressBook but in general if user have many folders with contacts its better to use some other CardDav client because this client has own restrictions.

#2 - 07/16/2019 05:34 AM - Alexey Bobyr

- Status changed from New to Resolved

Scalix DAV Special AdreesBook folders (Scalix System Directory, Scalix Personal Directory) do not shows in Addressbook considering that client simply can not handle it.

- File mac_contact app3.JPG added
- File mac_contact app2.JPG added
- File mac_contact app1.JPG added
- File swa+mac contact app.JPG added

I just tested CardDAV in macOS Mojave Version 10.14.4

here just Manage Personal contacts. we can add, modify, delete contact from both side (webmail and Mac Contacts application) but does not appear Scalix system directory.
